

Northwest Territories Population – July 2014

On July 1, 2014 Statistics Canada estimated that 43,623 people were living in the Northwest Territories, a decrease of 0.5% from the previous year. By comparison, Canada's population increased by 1.1% over the same period. With the exception of the Northwest Territories and some of the Atlantic provinces, all other provinces and territories experienced positive growth between July 1, 2013 and July 1, 2014. Growth exceeded the national level in Nunavut (3.2%), Alberta (2.9%), Saskatchewan (1.7%), and Manitoba (1.3%).

In total, the population in the Northwest Territories fell by 218 persons between July 1, 2013 and July 1, 2014. The components of natural increase consisted of 698 births and 197 deaths, resulting in a net increase of 501 persons. Inter-provincial migration accounted for 1,974 persons moving into the Northwest Territories from other provinces and territories, while 2,755 persons moved away, representing a net loss of 781 persons. Internationally, there was a net immigration of 62 persons.

In terms of quarterly growth, the NWT population decreased by 102 persons between April 1, 2014 and July 1, 2014. The population decline resulted from a net loss of 231 inter-provincial migrants offset by a gain of 114 persons through natural increase and 15 net international in-migrants.

Statistics Canada jointly released the total population estimates along with the corresponding age and sex breakdowns for each of the provinces and territories. The population pyramid portrays that the NWT population aged considerably between July 1, 1994 and July 1, 2014 (Figure 1). The aging of the NWT population is also apparent by an increase in the median age, as it rose from 27.9 to 32.9 years in the past 20 years. However, compared to Canada, the NWT population remains relatively young, as the median age at the national level at July 1, 2014 was 40.4 years.

Note: *Net International* represents the net total of all Immigrants, Emigrants, Returning Canadians, Non-Permanent Residents and Individuals Temporarily Abroad.
Error of Closure represents the difference in population change as measured by the individual components of growth and that observed using 2011, 2006, 2001 and 1996 census-based population estimates.
